HR-57

ADAPTER

Adapts Plug/Housing connector to ring-style connections for dash mounted toggle dimmer switches

This adapter connects any of the following headlight dimmer switch wiring to our DS-05 Toggle Dimmer Switch:

1. Our HR-56 Headlight Relief Relay Kit
2. Our wiring harness
3. Another company's wiring harness

... as long as there is a standard three-connection dimmer switch plug on the recipient wires. This eliminates the need to cut off the plug and then hand crimp ring terminals for attaching to the toggle dimmer switch. The blue wire is the feed wire, which will go to the center terminal on the toggle, red is low beam and brown is high beam.
